Able City's Journey to Streamlined Operations from BQE to Monograph

15% Profit Growth

4x Efficiency Gain

2x Confidence Boost

Before Monograph, Able City was bottlenecked by BQE Core's overwhelming customization and complexity. It was difficult to manage projects effectively, which ultimately turned the tool into an administrative burden in the office.

“
Monograph has unified our team around critical data by simplifying the data clutter and creative graphical user-friendly tools. It is the perfect balance between robust data and usability.
”

The decision to switch was driven by Monograph's user-friendly design and streamlined project creation experience. Mario highlights that setting up projects correctly and quickly was one of the most surprising benefits they discovered. The intuitive interface reduced the time spent on administrative tasks, allowing the team to focus more on their architectural work.

Today, Monograph plays a pivotal role in keeping tabs on all project financial information at Able City. Mario particularly loves how easy it is to access the necessary data instantly. The team gains real-time insights into budgets and overall project performance, which boosts their efficiency and decision-making capabilities.
